

Ashwini Shinde

AWS DevOps Engineer

📍 Pune, Maharashtra, India | 📞 +91-8767009618 | ✉️ ashushinde115@gmail.com

PROFESSIONAL SUMMARY

AWS DevOps Engineer with **3+ years of experience** in designing, automating, and managing scalable cloud infrastructure on AWS. Hands-on expertise in **Amazon EKS, Kubernetes, Docker, Terraform, Jenkins, GitHub Actions, Helm, ArgoCD, and Linux Administration**. Proven track record of reducing infrastructure provisioning time by **50%**, improving deployment frequency by **70%** through CI/CD automation, and maintaining **99.9% production availability**. Experienced in implementing **Infrastructure as Code (IaC), GitOps, DevSecOps, monitoring, and cloud security** to deliver highly available, secure, and scalable applications. Strong troubleshooting, automation, and cross-functional collaboration skills with experience supporting production environments.

TECHNICAL SKILLS

- **Cloud Platforms:** Amazon Web Services (AWS), EC2, S3, IAM, VPC, Route53, CloudFront, EKS, ECS (Basic), RDS, Auto Scaling, Elastic Load Balancer (ALB/NLB), Lambda, CloudWatch, SNS, SQS
- **Containerization & Orchestration:** Docker, Kubernetes, Amazon EKS, Helm, kubectl
- **Infrastructure as Code:** Terraform, AWS CloudFormation
- **CI/CD:** Jenkins, GitHub Actions, ArgoCD, Git, GitHub
- **DevSecOps:** SonarQube, Trivy, OWASP Dependency Check
- **Monitoring & Logging:** Prometheus, Grafana, AWS CloudWatch, Moogsoft
- **Configuration Management:** Ansible
- **Scripting:** Shell Scripting, Python
- **Operating Systems:** Linux (Ubuntu, Amazon Linux, CentOS)
- **ITSM & Operations:** ServiceNow, Control-M, Incident Management, Change Management, SLA Monitoring

PROFESSIONAL EXPERIENCE

DevOps Engineer | JDIT Business Solutions Pvt. Ltd.

July 2023 – Present | Pune, Maharashtra

Roles & Responsibilities:

- Designed, deployed, and administered highly available **Amazon EKS** clusters supporting production workloads with **99.9% uptime**.
- Automated AWS infrastructure provisioning using **Terraform**, reducing infrastructure deployment time by **50%** and ensuring consistent environment creation.
- Developed and maintained reusable Terraform modules for provisioning **VPC, EC2, IAM, ALB, Route53, RDS, EKS, Security Groups, and Auto Scaling** resources.
- Built and optimized **CI/CD pipelines** using **Jenkins** and **GitHub Actions**, reducing application deployment time from **40 minutes to under 10 minutes**.
- Automated container deployment using **Docker, Helm, and ArgoCD**, enabling **zero-downtime** production releases.
- Implemented **GitOps** deployment strategy using ArgoCD, improving deployment consistency and reducing manual deployment efforts by **80%**.

- Integrated **SonarQube**, **Trivy**, and **OWASP Dependency Check** into CI/CD pipelines, enabling automated security scanning and improving application security compliance.
- Configured Kubernetes resources including **Deployments**, **StatefulSets**, **DaemonSets**, **Services**, **Ingress Controllers**, **ConfigMaps**, **Secrets**, **Persistent Volumes**, and **Horizontal Pod Autoscalers (HPA)**.
- Managed Docker image creation, optimization, and lifecycle through container registries.
- Implemented centralized infrastructure and application monitoring using **Prometheus**, **Grafana**, and **AWS CloudWatch**, reducing Mean Time to Detect (MTTD) by **40%**.
- Configured alerting and dashboards to proactively monitor CPU, Memory, Disk Utilization, Kubernetes Cluster Health, and Application Performance.
- Automated Linux administration tasks using **Shell Scripting** and **Python**, reducing repetitive operational work by **60%**.
- Managed IAM users, roles, policies, security groups, networking, and access controls following AWS security best practices.
- Performed production deployments using **Rolling Updates**, minimizing service interruptions during releases.

PROJECTS

AWS Infrastructure Automation using Terraform

Technologies: Terraform, AWS, VPC, EC2, IAM, Route53, ALB, RDS, EKS

- Built reusable Terraform modules following industry best practices.
- Automated provisioning of networking, compute, storage, IAM, and Kubernetes resources.
- Configured remote Terraform state management.
- Implemented modular infrastructure supporting multiple environments (Dev, QA, Production).
- Reduced manual infrastructure creation effort by **over 50%**.
- Improved infrastructure consistency and eliminated configuration drift.

Kubernetes Monitoring & Logging

Technologies: Prometheus, Grafana, CloudWatch, Kubernetes

- Configured Prometheus for Kubernetes metrics collection.
- Built Grafana dashboards for infrastructure, application, and Kubernetes monitoring.
- Configured CloudWatch integration for AWS resource monitoring.
- Implemented proactive alerting for CPU, Memory, Pod Health, and Storage utilization.
- Reduced Mean Time to Detect (MTTD) by **40%**.
- Improved production issue resolution time through centralized monitoring and alerting.

CERTIFICATIONS

AWS Certified Solutions Architect – Associate

Issued by AWS Training & Certification – [Verify Credential](#)

Validity: 20 Jan 2025 to 20 Jan 2028

EDUCATION

Bachelor of Computer Science | 2020

Pune University
